

Welcome... Thank you for considering York Hospital Breast Care for your breast health and breast cancer screening. We are a Breast Imaging Center of Excellence, which holds us to the highest standard of quality imaging and biopsy as we provide a comprehensive breast imaging diagnostic service.

Our breast radiologists are all breast fellowship-trained, and our expertise makes a difference. We are dedicated breast radiologists who exclusively interpret breast images and perform breast procedures, leading to fewer false positives and more accurate breast biopsies. We are accompanied by a team of dedicated mammography technologists with expert skill in positioning to promote patient comfort while ensuring accurate imaging. We have a team of breast nurse navigators who work closely with you, our patient, during the biopsy process, and closely with our treatment team, if you are diagnosed with a breast cancer.

Our breast care team participates in quality educational opportunities that include radiology pathology conferences as well as multi-disciplinary conferences, to ensure your physicians work collaboratively on your treatment every step of the way.

We've included the industry's most up to date facts and guidance on this webpage. You'll discover what age to begin and when to stop screening mammography, along with current breast cancer screening guidelines. We also offer information for our male, as well as transgender patients, which is in accordance with the American College of Radiology imaging guidelines.

We are proud to offer both our signature "live read" service as well as results in a few days, to best accommodate every patient's needs; and look forward to caring for you at the earliest opportunity.

Yours in good health,

*Amanda Lewis, DO*  
Medical Director  
York Hospital Breast Care Services
